Development of quality indicators for *in-hospital care of general urological patients*: a survey and Delphi study

Are you a healthcare professional working in clinical specialty of urology?

Are you interested in developing quality indicators for quality improvement and reflective practice?

Then, we would love to hear from you! A short survey is being conducted online to **identify clinical areas of priority and develop new indicators** for measuring quality of care in urology.

Who can participate?

- You are a **health care professional who is primarily managing urological diseases in Australia or New Zealand**
- You want to develop and standardise a set of quality indicators in general urology that improve quality of care via audit and feedback and reflective practice.
- You are interested in **quality improvement for enhanced patient outcomes and reflective clinical practice.**

To participate in the survey:
Contact Harvey Koh at jia.koh@monash.edu
OR
Use the QR code provided/click [here](#).
